

The first real series 80 'B' - Unveiled at this NAMM

booth 1647 - hall E

The latest craze of producing rack mounting channels of classic consoles is well justified. How better to record great sounds than to use modern digital recorders with input modules from the classic mixing consoles? The legendary Trident series 80 console is certainly no exception. The success of this British engineered classic has prompted the release of many Series 80 so-called 'original' channel modules. However, there has never been a series 80 module produced that is **truly authentic**... until now...

The new Series 80 dual classic channel module is exclusively designed by Trident founder Mr Malcolm Toft. Mr Toft, in cooperation with JOEMEER makers Fletcher Electroacoustics Ltd., has finally produced (exactly 20 years from the original console's first showing), the definitive 80 module. "This EQ conforms in every way to my original series 80 specification and design.", explains Malcolm Toft, "I am truly happy that this EQ carries the original feeling of the series 80 into the 21st century. And, of course, it sounds identical."

The new 2001 Series 80 announced at this show adds to the classic line of Trident-MTA products:

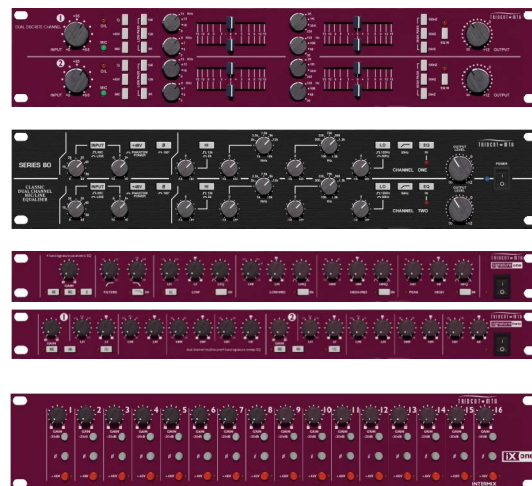

'A' range module, dual channel mic pre/classic inductive EQ. Identical in every way to the exclusive of consoles - the Trident A \$3699 List

Series 80, NEW dual channel fully discrete classic EQ. An authentic re-issue of the most world famous Trident desk. \$2499 List

Signature series, featuring mono fully parametric and dual channel 4 band sweep units. Rack mounting channels from Malcolm's more modern consoles, the MTA 980 and 924. \$1299 List each

iX-one. Featuring 16 independent mic pre amps from the signature series - ideal multi channel interface for Pro Tools. \$1999 List

The Trident-MTA Range is available exclusively from the USA JOEMEER & Trident-MTA distributor, PMI. address below...
